

CITY OF CLEVELAND
Mayor Frank G. Jackson

The Division of Waste Collection **COMPOSTING CLINICS**

Join us at our composting clinics and learn how you can turn yard waste, grass clippings, leaves and light brush into soil nutrients for your landscaping needs.

Why Use Composting?

Composting yard waste and food is a great disposal option for recycling, plant nutrients, saving landfill space, reducing disposal cost, helping the environment and it is rich in nutrients. This process is used in gardens, landscaping, horticulture, and agriculture. The compost itself is beneficial for land in many ways, including:

- A soil conditioner.
- A fertilizer to add vital humus or humic acids.
- A natural pesticide for soil.

In eco-systems, compost is useful for:

- Erosion control.
- Land and stream reclamation
- Wetland construction.
